

Magic Print Instructions

These instructions are tailored towards taking your baby's hand or footprints as this is the most popular product we sell. The same instructions apply for adult prints too.

1. Ensure the baby's foot or hand is clean and dry.
2. Remove the magic wipe from the packet and wipe the baby's foot or hand with the wipe, please ensure you have completely covered the bottom of the foot or the palm of the hand to ensure you capture a full print.
3. Please be careful not to touch the paper with your fingerprints as it will spoil the sheet (your fingerprints will develop in the same way as the baby's foot or hand!) one way around this is to have one person wipe the foot/hand with the wipe and the other person takes the print on the paper so they do not touch the wipe at all. Alternatively you could wear gloves while wiping the foot/hand and then remove these when taking the print and holding the paper.
4. Press the wiped foot/hand onto the paper, press onto the side of the paper which has NOT been marked by Felix & Reuben. It is recommended that you put the paper against a board of some sort i.e a place matt to ensure it is supported and you have something to press the foot or hand against. You could even secure it with a little clip or blue tack to keep it secure. Make sure the foot/hand does not move when on the paper as it may result in a smudged finish. It is recommended that you press the heel onto the paper first and then roll the foot towards the toes – this way you will reach all parts of the foot. This process is always easier when the baby is relaxed or sleepy (asleep is even easier!)
5. Lift the foot/hand carefully up and away from the paper and you are finished! Your print will develop and you will start to see the detail magically appear.

Important Notes :

- Even though this is non-toxic and is used in hospitals on new born babies please wipe the baby's foot or hand with a wet wipe (or warm soapy water) when finished to remove traces of the wipe's solution.
- Please ensure that the baby does not put their hand in their mouth while it has the magic solutions on the skin. This is just a recommend precaution although we have not heard of any instances where it can harm your baby.
- When the wipe has been opened it must be used immediately. If you put it back in the packet and wrap in foil it may preserve the life of it but it is only recommended to take a few prints and does not last for long periods of time once opened.
